STREAKS -> POINTS

SHORT DAILY PRACTICE

ARTICLES TO COMPLETE

Articles by us, dedicated
roadmaps, sheets ->
centrally controlled

1. Technical Competence
 - **Knowledge depth** → CS fundamentals, algorithms, data structures, system design.
 - **Problem-solving ability** → Can you break down problems logically and reach a solution?
 - **Code quality / technical communication** → Writing clean, maintainable code, explaining thought process.
 - **Practical skills** → Familiarity with frameworks, tools, debugging, testing. (This is where DSA, system design, and coding rounds sit.)
2. Cognitive & Analytical Skills
 - **Structured thinking** → Breaking complex problems into smaller solvable chunks.
 - **Creativity** → Innovative approaches, not just textbook solutions.
 - **Decision-making** → Ability to weigh trade-offs and justify choices.
 - **Learning agility** → How quickly you adapt when stuck or when interviewer hints at a new direction.
3. Behavioral & Soft Skills
 - **Communication clarity** → Can you explain technical concepts simply and logically?
 - **Teamwork & collaboration** → Do you show humility and openness to feedback?
 - **Leadership & initiative** → Taking ownership, even in small examples.
 - **Cultural fit** → Alignment with company values, attitude towards work.
 - **Confidence vs. arrogance balance** → Delivering answers with assurance without overselling.
4. Professionalism & Character
 - **Integrity** → Honesty about what you know/don't know.
 - **Preparation & seriousness** → Did you research the company/role?
 - **Composure under stress** → How you react when challenged or pushed.
 - **Motivation** → Why you want this role/company (authenticity).
